

## **Versora Announces Full Support For Migrations From Microsoft Windows to SUSE Linux Enterprise Desktop 10 from Novell With Latest Release of Progression Desktop**

**LINUXWORLD, SAN FRANCISCO – August 15, 2006** – Versora, the leader in Windows to Linux migration solutions, today announced the latest release of their flagship desktop migration product, Progression Desktop for Linux, which offers full support for migrations from Microsoft Windows desktops to SUSE Linux Enterprise Desktop10 from Novell.

Recent reviews herald SUSE Linux Enterprise Desktop 10 as the most impressive Linux distribution ever released and tout the product as “a serious contender for enterprise workstation use”.

“SUSE Linux Enterprise Desktop is the market's only enterprise-quality Linux\* desktop that's ready for routine business use,” said Justin Steinman, director of marketing for Linux and Open Platform Solutions at Novell. “SUSE Linux Enterprise Desktop provides market-leading usability, seamless interoperability with existing enterprise computer systems, and dozens of essential office applications. With SUSE Linux Enterprise Desktop, customers can dramatically reduce costs, improve end-user security and increase workforce productivity.”

“With SUSE Linux Enterprise Desktop 10, organizations now have an alternative to the Microsoft Windows desktop,” said Matthew Warne, VP Product Management at Versora. “With the combination of this solid desktop offering and Novell’s awareness campaign, more organizations will be migrating off Windows to Linux than ever before. Progression Desktop for Linux will make that transition easier.”

Versora's Progression Desktop automates the migration of users' data, application and system settings from Windows to Linux desktops including all key desktop productivity settings and data such as e-mail, contacts, browser settings and calendar.

“Progression Desktop for Linux provides a valuable solution to customers seeking to migrate to Linux,” said Steinman. “Versora’s support of SUSE Linux Enterprise Desktop 10 eliminates the complexity of a manual migration and ensures that customers can move to Linux quickly, easily and with no impact on productivity.”

Progression Desktop employs an easy to use "next, next, finished" interface to guide the user through a migration. Additionally, migrations can be fully automated from a command line to allow integration with third party system management tools such as Novell ZENworks.

### **About Versora**

Versora is a leading provider of migration solutions. In addition to multi-platform desktop migration software (Windows to Windows, Windows to Linux), Versora provides flexible technology that exports from Rich Desktop Client to Web Services applications on a platform that is easily customized.
